THE MAGNET TROP

*An exceptional range of traps for the
live-capture of foxes, possums, cats,
mynas, starlings and pigeons*

Excellence in Pest Animal Management

The Magnet Trap System

ACTA has been appointed by Pest-IT, to distribute a range of high quality and competitively priced cage traps under the MAGNET TRAP brand.

The Magnet Trap System is a range of Australian designed heavy-duty traps for domestic and professional trapping programs. All traps in the range are collapsible for easy transport and storage and they are set up in minutes.

Why are trapping programs the ideal way to reduce pest bird populations?

- Programs can be conducted at regular intervals – monthly, quarterly, annually
- Trapping is targeted, therefore any protected species caught can be released
- Trapping is discreet (no birds falling from the sky after poisoning)
- Birds are provided shelter, food, water, roosting perches and care in the trap

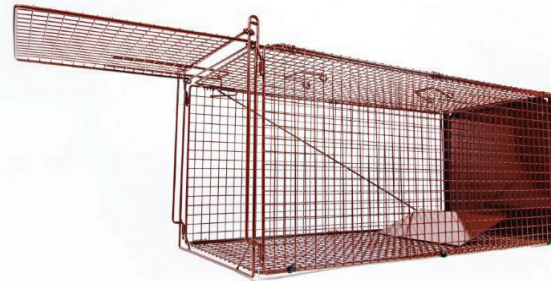

Introducing The Magnet Trap

The new Magnet Trap range includes the world famous Myna Magnet that has been in use for the control of the Indian Myna (*Acridotheris tristis*) in every corner of the Globe. The complete Magnet Trap range now includes a variety of collapsible, professional grade vertebrate pest animal traps for control of feral cats, possums, mynas, starlings, pigeons, and foxes to name a few.

Following the innovations of the original Myna Magnet, the need arose for a smaller, more efficient and easy to handle myna trap. This trap is known as the Mini Myna Magnet. Further development was needed in response to government and non-government agencies requirements and landholders alike for an additional component in the baiting, shooting components of Integrated Pest Management.

The Fox Magnet

Dimensions: 1050 x 450 x 370mm

The Fox Magnet is a large, collapsible, live-capture trap used for foxes and small wild dogs. Cage trapping offers government agencies, NGO's and landholders an excellent Integrated Pest Management (IPM) alternative to shooting and poisoning, which is especially useful in suburban and regional townships.

The Possum and Cat Magnet

Dimensions: 600 x 300 x 300mm

The Possum and Cat Magnet is a medium sized, collapsible, live-capture trap used for removing and relocating possums from domestic and commercial roof spaces, and for capturing feral cats in cities, suburban and rural areas. Consult your local State legislation when dealing with native, protected species such as possums.

The Mini Myna Magnet

Dimensions: 700 x 400 x 800mm

The most widely used trap design in Australia today. The Mini Myna Magnet is collapsible, durable and a proven solution to this difficult to control species – the Indian myna and European starling. The trap includes all the welfare options you would expect from the original Myna Magnet such as feed and water dispensers, solid roof, no sharp edges and a highly engineered 20 piece one-way valve. The collapsible design allows easy storage and transport after trapping is complete. Unlike home-made mesh traps; scratches, bird (and human) injury, rusty components and bird escapees are unlikely with the durable, well designed and quality manufactured Mini Myna Magnet.

The Pigeon Magnet

Dimensions: 600mm x 700mm x 700mm

Following in the footsteps of the successful Myna Magnet, the Pigeon Magnet is a durable, collapsible and commercial size trapping solution for reducing feral pigeon populations. This trap has successfully and humanely assisted facilities in Australia, New Zealand and Asia with the removal of this disease carrying species. Trapping pigeons is easy, safe, discrete and targeted with the Pigeon Magnet.
